

# FUSION POCKET

Who says life is about having to compromise? Komfi's Fusion Pocket mattress combines the traditional support of pocket springs with the industry-leading science of 4G technology. By delivering the 'just right' firmness level that pleases all, the Fusion Pocket mattress is a welcome addition to bedrooms across the land. A generous 26cm deep, Fusion Pocket owners benefit from both spring and foam technologies, all topped by a hygienic removable quilted top cover.

### 1. 'Quick Zip' removable cover (3cm)

The luxury quilted top layer of the Fusion range can be easily removed via a premium-quality zip. The soft-feel cover is machine washable for the ultimate in mattress hygiene. It offers a simple and speedy way to rejuvenate the 4G-infused Fusion mattress.

### 2. 4G technology (5cm)

Komfi's innovative 4G foam incorporates 'open cell' technology for a superior sleep experience. Superconductive 4G expertly cools and ventilates from head to toe, delivering the optimal sleep temperature without compromising on support.

### 3. HD memory foam (3cm)

High density viscoelastic memory foam conforms to the body's shape, providing transitional support whilst simultaneously reducing pressure and body heat. Returning to its original shape after each use, it banishes the dips and sags associated with traditional mattresses.

### 4. Pocket sprung base layer (15cm)

Encapsulated within durable foam sit 1500 individual pocket springs. This base provides a best-of-both-worlds sleep experience: bounce and support. Combining the technology of foam with the tradition of springs, the Fusion Pocket offers a medium firmness sleep experience.
